Porcelain			\$17.00		\$25.00	65.00

## ALL MURAL SETUPS \$50 EACH

### FRAMING TILE MURALS

Framed Tile Murals make beautiful framed works of art. We recommend you take your mural concept to a professional frame shop before mounting to discuss how best to accomplish what you want. Your frame shop may also mount the mural for you.

Tile murals may be mounted on hardboard or plywood back with a quality organic tile adhesive such as "Hydroment Multi-Purpose Ceramic Tile Mastic" following the manufacturers instructions. You may choose to grout or not grout the mural depending on your preference and the type of tiles used. The mural may then be framed. Remember - the tile is heavy. A tile mural is similar in weight to a thick glass mirror of the same dimensions.

## STONE

*These tiles have some natural imperfections on the surface and edges.  
They are very natural and organic, working well with other natural elements.  
Works well for fireplaces kitchens or baths for a natural stone look.*

### [SIZES]

4x4, 6x6, 8x8, 12x12

### [SURFACES]

Tumbled Botticino Marble - UV Resistant - Matte Surface  
Photo White Tumbled Marble - UV Resistant - Matte Surface

### [INSTALLATION & CARE]

The tiles are very porous and must be sealed if used in water applications such as showers or backsplashes. Tumbled Stone is a compressed sandstone product. Each tile is individually cut, causing some variation in color, texture, size and thickness. You may find chipped edges and corners missing on various tiles.. You may use standard adhesive recommended for tumbled stone tile. Sanded or un-sanded grout may be used.

## CERAMIC

*These are very white and process clear sharp images. They can be used for wall murals,  
showers, and backsplashes. These tiles are not recommended for floor applications.  
They can be used outside only out of UV exposure and where it doesn't freeze.*

### [SIZES]

4.25x4.25, 6x6, 8x8, 12x12

### [SURFACES]

Glossy Tile UV Resistant - Excellent Gloss  
Silky Satin Finish - Great for bathrooms and kitchens. Higher scratch resistance. Excellent balance between gloss & matte.  
Matte Tile - UV Resistant - White Stone Like Matte Finish

### [INSTALLATION & CARE]

Install the tiles as you would install any ceramic wall tile using either a high quality thin set or high quality tile mastic. Care of the image side of the tiles is important during installation. They can be covered with a low-tack tape and protective paper during the installation or just be careful not to get mastic or thin-set on the image side or edges. Do not stack with out pads covering the image side.

Use a siliconized non-sanded grout such as "Polyblend® Ceramic Tile Caulk." Mural grouting colors are difficult because of the many colors in the image so something neutral in a color that most pleases your eye will be fine in the finished mural. Ask your installer to bring you some sample grout colors to review.

You will receive recommended grout spacing with your order. Most large murals are designed for grout spacing of 1/8". A little smaller would be fine but the tile varies slightly in size so be sure to watch how things line up.

## PORCELAIN

*Good for kitchens, bathrooms or swimming pools*

### [SIZES]

4x4, 6x6, 8x8, 12x12 Aqua Porcelain  
6x6, 12x12 Porcelain

### [SURFACES]

Aqua Porcelain Tile - UV Resistant - Gloss Surface  
Aqua Porcelain Tile - UV Resistant - Matte Surface  
Porcelain Tile - Off white tile that generates a more muted or artistic color reproduction

### [INSTALLATION & CARE]

It is a non-porous tile, impervious to freeze/thaw conditions. Recommended for all water applications. You may use standard adhesive recommended for porcelain tile. Sanded or un-sanded grout may be used. Tiles can be cleaned with any household non-abrasive cleaner and a soft cloth or sponge.

## GLASS

*Great for kitchen and bathrooms and can also be used on floors.  
The textured glass tiles are the first tiles to meet and exceed ASTM tests set forth by  
ANSI standards for commercial and residential floor and wall applications.*

### [SIZES]

Glass Smooth 4.25x4.25, 6x6, 8x8, 12x12  
Glass Textured 6x6, 12x12

### [SURFACES]

Available in both clear and textured glass, tempered and non-tempered.  
Images are applied to the backside making the tiles durable and easy to clean.

### [INSTALLATION & CARE]

Tempered glass tiles cannot be cut, so for applications where cutting is necessary (corners, holes, etc. in floor installations), you would use non-tempered tile. Tempering is added to the larger tiles for strength. The 6" x 6" tiles meet the ANSI and ASTM standards above without tempering. The 12" x 12" tiles are available in tempered and non-tempered. For the 12" tile installations, you would want to use the tempered tiles except where cutting is needed. Image the non-tempered tile prior to cutting, as pre-cut tile may fracture during pressing. The non-tempered tile may be cut with a glasscutter, or a tile saw (wet saw application, new diamond blade) or using a waterjet cutting service (check your local vendors). We recommend using an Epoxy Thin-Set mortar in white for mounting the textured glass tile in any application. This adhesive should be readily available in most areas, and has exhibited superior bond strength without damaging the Single Step white backing on the tiles. You should use a grout specifically formulated for use with glass tile. Tiles can be cleaned with any household non-abrasive cleaner and a soft cloth or sponge.

Smooth glass tiles have a frosted backing, and are for decorative use only in tile stands or framed pieces.  
The tile is translucent, and can be used in lighted applications.
